## (54) CAR BODY SKELETON MEMBER JOINING STRUCTURE

## (57)Abstract:

PURPOSE: To accomplish a joint structure which is free from generation of surface unevenness in the joining part of a joint material with a skeleton member such as front pillar.

CONSTITUTION: A joint front pillar upper 12 is formed by casting, and steps 40, 50, 60 are formed at the joint edges with car body skeleton members 18, 20, 22. The level differences of these steps are made equal to the thicknesses of the skeleton members 18, 20, 22, so that no surface unevenness is generated in the joining parts of the front pillar upper 12 with the skeleton members 18, 20, 22 if the steps 40, 50, 60 of the front pillar upper 12 are inserted to the inside of the members 18, 20, 22 assuming a closed section.

**LEGAL STATUS**

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]
